CABIN CREEK
WIND FARM

FACT SHEET

Cabin Creek Wind, Building Relationships with Ranchers, Benefiting Craig County

Cabin Creek Wind is a community effort made up of more than 30 local ranchers and landowners who are seeking to protect the legacy of their land while helping the entire Craig County community prosper by hosting wind energy turbines. Triple Oak is making great progress toward its goal of developing wind power in Craig County and has over 20,000 acres committed to our Cabin Creek wind farm.

Our team has decades of experience with wind, having developed projects across the country since 2002. Triple Oak has the necessary resources and the experience to successfully develop a wind project in Craig County in the coming years.

Cabin Creek Wind will provide a reliable, affordable, and sustainable energy source to the regional electric grid and will bring significant long-term investment to the Craig County community. This project will preserve and protect the county's rural, agricultural landscape for current and future generations.

LIVESTOCK AND WIND TURBINES

- Wind turbines have a minimal footprint, around one acre of land or less, meaning landowners can continue to successfully graze livestock around the turbines.
- There are over 70,000 turbines operating in the U.S. and many of these are on ranch lands where cattle and other livestock continue to graze and co-exist.

COUNTY ROADS

- Wind farms depend on good roads and infrastructure.
- Triple Oak will work with Craig County to develop a Road Use Agreement to ensure roads and bridges are upgraded where needed for wind turbine deliveries and repair any roads damaged during the construction process.
- Triple Oak will leave roads better than we found them, and improved roads and infrastructure will be a long-term benefit to all residents and visitors to Craig County.

PROPERTY TAXES

- Every wind turbine that is installed on private land becomes taxable property by the county, which provides a reliable source of funding for local schools.
- Taxes from the project may also fund emergency services, infrastructure, and other county services.

FACT SHEET

JOBS

- Approximately 300 jobs will be created during construction of wind turbines in Craig County.
- Cabin Creek will employ 10 to 15 full-time people locally during operation.
- Construction will require a wide range of specialty technicians, including equipment operators, carpenters, steel and iron workers, concrete laborers and finishers, electricians, plumbers, painters, and truck drivers.
- Triple Oak will provide apprenticeship programs in a variety of trades.

LANDOWNER RIGHTS

- Triple Oak supports landowners who want to exercise their rights to develop their land, their right to access natural resources, and their right to additional revenue streams on their property.

SETBACKS

- Cabin Creek Wind will establish appropriate wind turbine setbacks that protect our landowner partners, their neighbors, and the surrounding local community.
- Setbacks will be established for houses, public roads, buildings and other structures, transmission lines, schools, and municipalities.

DID YOU KNOW?

- Oklahoma is #3 in the nation for electricity generated by wind turbines.
- More than $75 million is paid annually to Oklahoma landowners as the result of wind, solar and energy storage facilities
- 83 Oklahoma school districts in 24 counties are supported by renewable energy.
- Clean power invests in local Oklahoma communities, providing property, state, and local taxes in 2022 totaling $123.2 million.
- 47% of Oklahoma electricity was produced by low-cost wind energy.
