LONG GRAIN
WIND FARM

Landowner Partner Update • September 2025

Greetings Long Grain landowners,

It's been an exciting year as we continue to develop Long Grain Wind. We want to welcome new landowners to the project and update everyone on our progress.

September 2025: What's New?

- Crittenden County Moratorium
- Project Progress
- Community Giving
- Coordination with Ag Pilots
- Everyone Is Talking About Wind

Landowner Updates

Crittenden County Moratorium – Your Voice Is Needed

As you may know, the Crittenden County Quorum Court passed a six-month moratorium on wind development in May. We understand this decision was made to give county officials time to consider additional local regulation of wind power. We were surprised and disappointed by this decision but remain committed to working with Judge Wheeless, the Planning Commission and the Quorum Court through the moratorium, to ensure Long Grain continues toward a county permit this fall.

For the past several years, our team has diligently engaged with Judge Wheeless and members of the Quorum Court and Planning Commission to educate them about wind power and provide project updates. It's also very important that your voice is heard as the county considers regulations that may impact your property.

Thank you to those who have already reached out to local officials. We need to continue outreach to Judge Wheeless, Justices of the Peace and members of the Planning Commission.

Please call, email or send a letter sharing that you are (1) concerned about new local regulations that impact your private property rights, (2) and that the County should encourage – not overregulate – the economic benefits from Long Grain Wind.

Judge Woody Wheeless
Phone: (870) 739-3200
Email: judgewheeless@crittco.com

Justice of the Peace Brad Moore
Phone: (870) 630-7209
Email: bmoore724@outlook.com

Project Progress

Design

The team has completed the 30% engineering design for the first project phase, which includes turbine locations, roads and turbine delivery routes. This design will enable us to meet project timelines and submit the county permit application this fall.

Electrical Grid Interconnection

The next phase of the interconnection study process will proceed in the coming months. Electrical grid interconnection is a major milestone in renewable energy development, representing both increasing financial commitment and project viability.

Studies and Surveys

In March we installed piezometers at each planned turbine location. Piezometers collect hydrology data and inform design for each turbine foundation.

We also installed sound detection equipment to measure bat activity in the area and continue to gather that data. This equipment only tracks bat sounds.

This summer, we started our American Land Title Association (ALTA) survey to examine property boundaries within the project for a project title insurance policy. We expect the ALTA survey to be completed in early fall. In September, we will begin a wetlands study, an important step in verifying locations for project infrastructure.

Community Giving

Our team is grateful for the opportunity to build partnerships with the Crittenden County community, including donations and sponsorships. In the first half of 2025, Long Grain Wind contributed more than $21,100 to several organizations serving Crittenden County, including the Marion Fire Department, Marion Chamber of Commerce, Sultana Disaster Museum and Families in Transition. In the second half of 2025, we look forward to working with organizations in Earle, including the school district and county museum.

Long Grain Wind sponsored the annual Walk a Mile fundraiser for Families in Transition

Coordination with Ag Pilots

Triple Oak works with agricultural pilots at every wind project development, prioritizing early communication. Toward that end, we held an introductory meeting with ag pilots operating in the project area. One of the more immediate concerns we heard was the potential for our surveyors to be working in the fields while pilots would be spraying this spring.

To address this concern, we have provided the surveyors' schedules to pilots and adjusted as needed to ensure safety and uninterrupted operations. We will continue to work with local pilots to ensure questions and concerns are addressed.

Everyone Is Talking About Wind

This spring the Arkansas state legislature passed Act 945 which introduced onerous wind energy regulations, effectively restricting the rights of landowners to host wind projects. Fortunately, the bill included an exception for projects that were under development, allowing us to continue developing Long Grain Wind.

We want to express sincerest thanks to every one of you who contacted state legislators to stand up for your property rights. Your voices helped ensure Long Grain Wind could continue development.

The federal government is also imposing new limitations on wind development. Despite these changes, we remain committed to Long Grain Wind. Energy demand continues to surge which creates a strong market for wind generation as part of an all-of-the-above energy solution. Now more than ever, Arkansas energy customers need the affordable, reliable, homegrown power Long Grain Wind will provide.
