A Message from Triple Oak Power CEO Jesse Gronner

Dear Landowners,

Thank you for placing your trust in Triple Oak Power and the role you play in helping to meet one of the top challenges our country faces today: rising energy demand and volatile prices. We are honored that you are our partners in power solutions that meet America's needs with domestic resources while delivering supportive economic benefits to your community.

I've been in the energy industry since 2001 and have never seen such rapid growth in technology driving demand. In fact, our nation hasn't seen energy demand rise at this pace since World War II, and no single energy resource can meet this growth on its own.

Spring 2026: What's New?

- Cabin Creek Wind
- Speaking Up for Property Rights
- Project Updates
- Meet The Team
- Stay Connected

At Triple Oak Power, we are meeting this moment by developing homegrown clean power. Supplying this current energy market requires all feasible and available energy generation solutions. Sustainable resources like wind are currently the fastest-to-deploy and most cost-effective ways to bring new power onto the grid. Due to their stable prices and flexibility, they are increasingly sought by top technology companies, manufacturers, utilities, and communities seeking affordable, reliable electricity.

We are proud to partner with landowners like you who make this work possible. And we remain committed to transparency, partnership, and long-term collaboration. I travel regularly to our project states – such as Arizona, Colorado, Washington, Kansas, Oklahoma, and Arkansas – and I look forward to seeing you soon. In the meantime, don't hesitate to reach out to me or our project development team.

Sincerely,

Jesse Gronner

Cabin Creek Wind

The Cabin Creek Wind project continues to advance at a steady pace. While there is still work ahead, the project is well-positioned for success. We deeply value your partnership and look forward to building a future that benefits landowners and Craig County as a whole.

Transmission Interconnection

We are excited to share we have signed our Generator Interconnection Agreement (GIA) with Associated Electric Cooperative in early March 2026. This milestone secures full rights to connect Cabin Creek Wind to the electrical grid and deliver sustainable, clean energy to future customers—a key milestone for our projects' commercial success.

Speaking Up for Property Rights

Oklahoma State Legislature

The 2026 legislative session adjourned recently without taking major action related to wind farm siting. Thank you to the landowners and teammates who again joined us in Oklahoma City to share the story of Cabin Creek.

We also appreciate the work of the Senate Leadership to find a compromise solution with the wind energy industry. While the bill ultimately did not pass this session, we were grateful for the chance to advocate for your private property rights.

Road-Use Agreement

This year, we expect to pursue a road-use agreement with Craig County to ensure roads used by the project are durable enough for turbine deliveries and that repairs occur after construction. The road-use agreement will ensure the project has access to roads as needed and that the project leaves roads in a good, if not better, state than before project construction.

That decision will require a vote by the Craig County Commission, and your voice will be important in ensuring the road use agreement is approved.

Your voice matters. If you'd like to participate in advocacy efforts, please contact Catrina Kelley at (918) 533-0310 or catrina.kelley@tripleoakpower.com.

Project Updates

Land

We now have sufficient land to site all planned turbines—over 32,000 acres under lease with more than 50 landowners. Our goal is to be complete with landowner leases and easements by the end of September.

Environmental Studies

Wildlife studies are well underway, and early this year, consultants conducted aerial studies using low-flying helicopters to identify large raptor nests, such as those of eagles, across the project area. These studies help ensure the wind farm and local wildlife successfully coexist.

Investing in Craig County

Our project team is proud to continue supporting local organizations across Craig County, especially in the Welch area. The Vinita Daily Journal highlighted our donation to Welch Public Schools enabling the purchase of a storage shed to house sports and playground equipment while freeing up hallway space.

The team also recently purchased hoodies for every member of the Welch High School band and covered costs for travel expenses for the Welch Schools gifted and talented program students and parents to visit NASA in Houston.

Welch elementary students gather with Sandy Layton (far left) and Catrina Kelley (far right) of Cabin Creek Wind on Wednesday when the energy company donated a new storage shed to house playground equipment.

Cabin Creek Wind donates storage shed to Welch Elementary

Denton Thomason
Journal Reporter

Welch Elementary School has a new storage shed to house their playground equipment thanks to a donation from Cabin Creek Wind.

"The wind energy company donated a new $3,500, 10x16-foot storage shed to the district this week that will be used to store playground equipment, various balls and sports gear, and the tricycle used for pre-K and kindergarten students.

"The addition of the outdoor storage shed also frees up a hallway that was being used to stack equipment.

Catrina Kelley, Cabin Creek's community liaison, said that they're always glad to support local schools.

"Since I've been with Cabin Creek Wind, we've really tried to jump in and help out wherever we can in the community," Kelley said. "When we heard Welch schools needed a storage shed to clear up some space, we knew right away we wanted to help. The school means a lot to me, and it's such an important part of our community. We just want to support them any chance we can."

Meet the Team

Many of you may already know our newest team member and Cabin Creek project development manager, Luke Vanderwork, but we wanted to take the time to introduce him. Luke, a Woodward County, OK native, joined the team in August after recently working as a developer for Enel Green Power, where he managed projects across the South-Central United States. Prior to his work as a renewable energy developer, Luke worked as a field representative for Oklahoma Congressman Frank Lucas, gaining experience in policy and rural affairs. He is a graduate of Oklahoma State University with a degree in agribusiness, and we're excited to have him on the team.

Stay Connected

If you've had any changes to your address, email, or phone number, please reach out to the Cabin Creek office, so we can keep your contact information up to date. For any questions or to get involved, please contact:

Visit our Welch office at 427 S. Commercial Street, Suite B.

Contact Catrina Kelley for project updates or how to get involved. (918) 533-0310 or catrina.kelley@tripleoakpower.com
